

## The day of the operation

Our wish is, your hair transplant from being a standard procedure to become a unique and special experience. This is how it will go just before we start:

- First you will have consultation with the doctor. He will ask about your personal medical history and then he will explain as clearly as possible about your personal operations plan.
- After you agree and get all the information about the plan, we will shave the donor area (back and sides), where we will extract your follicles.
- You will get your locker where you can leave your personal belongings. You will change your clothes and our medical staff will give you medical outfit.
- We will take pre-operative pictures for your personal operation file in order to evaluate the result in 12 months.
- We will start the procedure and during the extraction of the grafts, you will be lying on your front.
- When the extraction has been completed you will then be lying on your back in order for the medical team to place the grafts.
- In our medical team is always included an anaesthiologist, he is responsible that donor and recipient area will get local anesthetic, exactly as is used at the dentist. The operation is without any pain.
- We will take breaks throughout the procedure in order for you to have something to eat and drink or to go to the bathroom.
- It is very important for us to become a comfortable experience throughout the procedure. During the procedure you can listen to different music or watch TV channel.
- All of our staff are English speaking and are there for your comfort and satisfaction throughout the day.
- At the end of the procedure we will provide you written and explain the post operative procedures and arrange your appointment for the day after before you leave to your Hotel.
- Our doctors will be reachable any time you will need to ask something.
